## OPERATING SYSTEMS
**Spring 2013**

## Assignment 0502 Feedback

Haley Young

*1c* — You have successfully performed a number of command-line activities pertaining to file systems. (**+**)

*1d* — You worked with `dumpe2fs` and `hexdump`, captured their output, and captured your shell activities without any problems. (**+**)

*2e* — You successfully navigated a virtual disk at the byte level. You mixed a name up (it's *group* descriptor, not file descriptor), and your documentation, or lack of it, leaves some doubt on how you worked things out. Even though you did include the requested items, the disk you created is sufficiently small that you might very well have picked out some items purely by eyeballing them in the hex dump. Of course, you do show inodes, and I think you do understand things in general, but you leave a lot of things implicit such that there is room for doubt. (**|**)

*4d* — Your work shows some resource and documentation use in accomplishing this task, but as mentioned the lack of explicitness hampers this a tad. (**|**)

*4e* — Your version control activity in this assignment is completely appropriate for the work done. (**+**)

*4f* — Submitted on time. (**+**)
